Configuring PUSH and EMAIL motion detection notifications for Cloud series equipment (CCTV cameras and DVRs)

PARTIZAN

BE **DIFFERENT**
——
LEAD WITH IT

This manual is designed to quickly enable PUSH and EMAIL motion detection notifications for all Cloud CCTV cameras or PARTIZAN Cloud recorders without recording activation.

Settings can be made in the web version of the Partizan Cloud service in any browser regardless of the operating system.

1. Visit website www.partizancloud.com and log in to your account.

   Click on the "**LOGIN**" button at the top of the site or follow the link https://login.partizancloud.com/login directly from this manual.

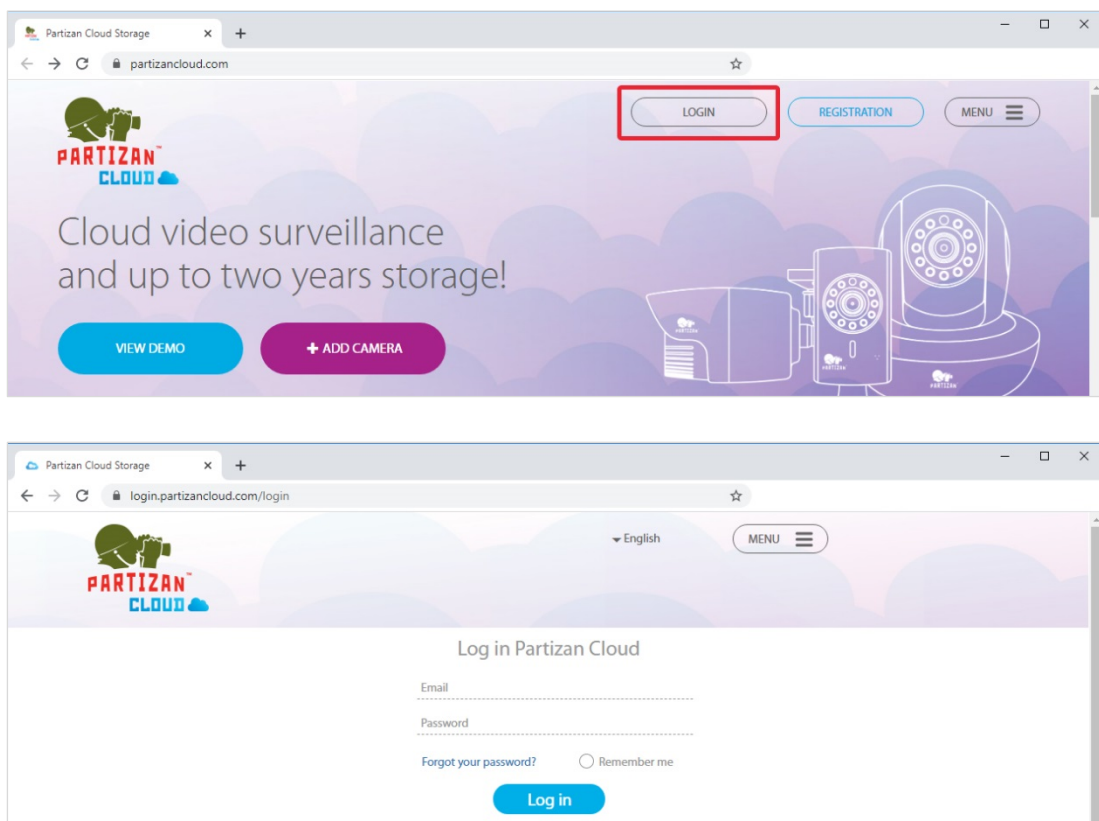

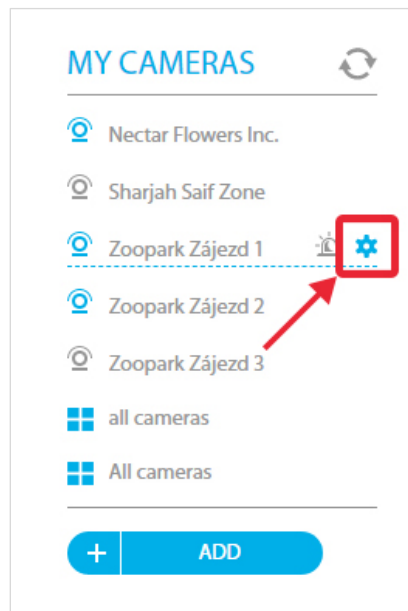

2. If there are no added devices in your account yet, you can add them by clicking on the "**ADD**" button in the cloud service interface:
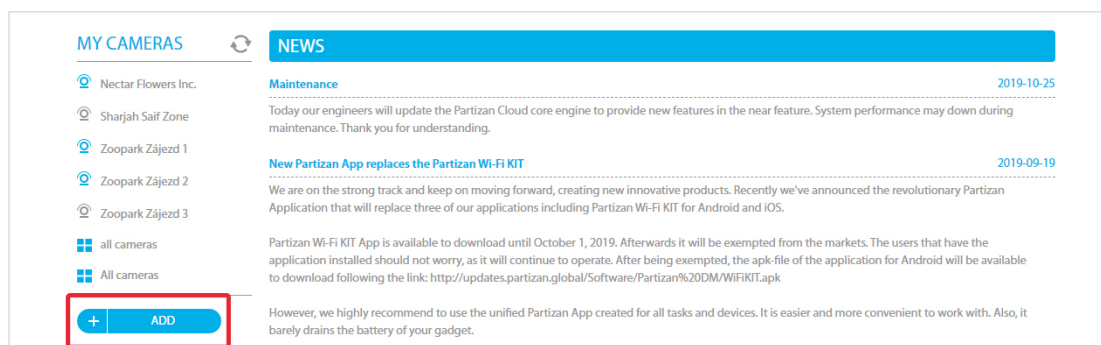

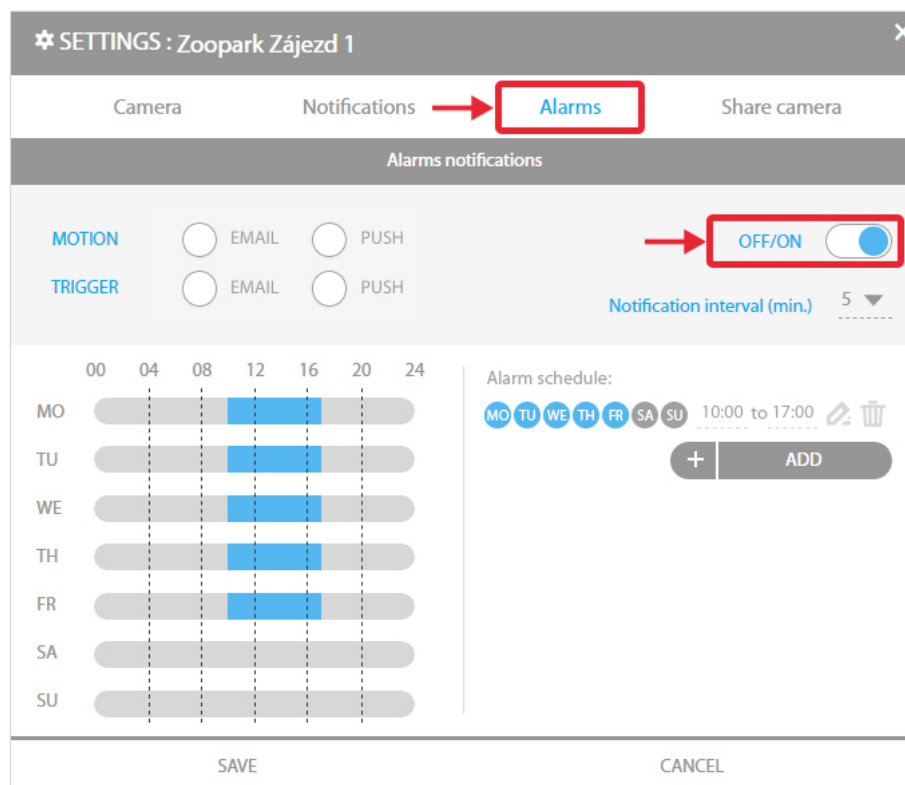

3. To enable PUSH messages, you have to activate the option "**Arm the camera**".
   In the left part of the window, in "**MY CAMERAS**" menu, hover over the desired camera and click on the **settings icon** to the right of the device name

In the menu that opens, go to the "**Alarms**" tab, press the switch icon on the right side of the menu - it will go to the right "**ON**" position:

4. Set the schedule and frequency of notifications.
For example, if the office is open from 9:00 to 18:00 and there is no need for notifications at this time on working days, the schedule may look like this:

5. Mark **which notifications should be sent** in the left part of the menu window:

If an external motion sensor is connected to the CCTV camera, then the "EMAIL" and "PUSH" marks in the "SENSOR" line will mean that notification messages will come only when an external sensor detects movement!

Click "SAVE" at the bottom of the settings window:

6. Now you can always quickly enable or disable the "**Arming**" status for this CCTV camera.
   To do this, hover over the camera and click on the **siren icon** to the right of the device name, on the left side of the window, in the "**MY CAMERAS**" menu:
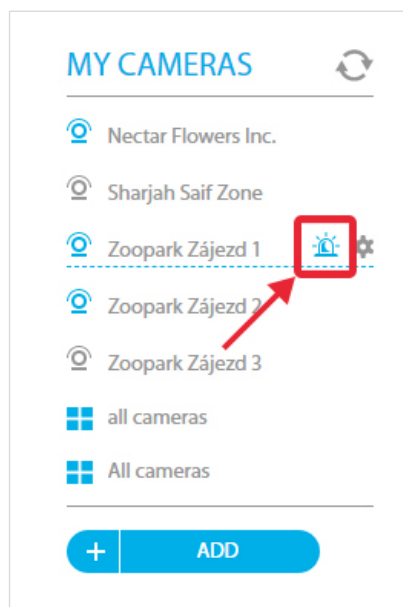

Confirm action:

Are you sure you want to arm current camera?   ×

Yes   ←   No

When "**Arming**" is turned on for selected CCTV camera, the notification settings that were set previously will be **automatically** applied to this camera.

To edit notifications and schedules, go to the device settings as described in item 3.

7. To receive **PUSH notifications** on your mobile device, install the **PARTIZAN CLOUD app for iOS or Android**:

   iOS: https://apps.apple.com/app/id957338864
   Android: https://play.google.com/store/apps/details?id=com.partizan.cloud

   To quickly install the mobile application for iOS or Android, scan the corresponding QR code:

Download on the App Store

GET IT ON Google Play

8. When motion detected you will receive a notification to the **e-mail** box that was registered in the Partizan Cloud service, as well as on your **mobile device** with the **PARTIZAN CLOUD** application installed:
